1 TA Consultation Meeting — October 7, 2026 (SRS & Hazard Analysis) 1
1.1 Meeting Metadata and Attendance 1
1.2 Pre-Meeting Agenda and 20-Minute Speaking Allocation 2
1.3 Key Technical Questions Discussed and TA Decisions Recorded 3

2 Team Working Session — October 5, 2026 (SRS & Hazard Brainstorming) 5
2.1 Attendance and Session Summary 5
2.2 Technical Architecture and Hazard Brainstorming Outcomes 5

3 Post-Meeting Action Items and GitHub Issue Assignments 5

This document records the structured preparation notes, speaking assignments, technical decisions, Teaching Assistant (TA) consultation feedback, and post-meeting action items for Team 23's October 2026 Software Requirements Specification (SRS) and Hazard Analysis deliverables (tracked in GitHub Issue #17).

1 TA Consultation Meeting — October 7, 2026 (SRS & Hazard Analysis)

This section documents the attendance, 20-minute speaking allocation, and technical decisions from Team 23's October 7, 2026 consultation with Teaching Assistant Rebecca Di Filippo regarding Week 06 (Requirements Document and Hazard Analysis Revision 0).

1.1 Meeting Metadata and Attendance

Table 1: October 7, 2026 TA Meeting Metadata and Attendance

Field	Details
Date & Time	Wednesday, October 7, 2026 (20-minute consultation slot)
Teaching Assistant	Rebecca Di Filippo
GitHub Meeting Issue	Issue #17 — TA Meeting - October 7 - SRS and Hazard Analysis
Milestone	Week 06: Req. Doc. and Hazard Analysis Rev 0
Team Attendance	[x] **Calvin Salsali** (`@CalvinSalsali04`) — Present (Product Scope, UI & Meeting Facilitator) [x] **Raymond Tao** (`@Raymondtaoo`) — Present (SRS Structure, Evaluation Metrics & Benchmarks) [x] **Jaden Moore** (`@JadenAntM`) — Present (Backend State Machine, Concurrency & Schedule) [x] **Richard Han** (`@richy1337`) — Present (Hazard Analysis FMEA, Privacy & Security)

1.2 Pre-Meeting Agenda and 20-Minute Speaking Allocation

To make full use of the 20-minute TA consultation, Team 23 divided the agenda into five structured segments so every member presented their subsystem and questions directly:

Table 2: October 7 TA Meeting Agenda and Member Speaking Roles

Time Slot	Lead Speaker	Agenda Topic and Materials Presented
0:00–3:00 (3 min)	**Calvin Salsali**	**Project Scope & Product Form Factor:** Presented Verity as a user-triggered desktop Chromium browser extension (Manifest V3) that assesses user-selected text and static images for AI-generation and digital manipulation signals, returning evidence, uncertainty, and next verification steps rather than a "universal truth" verdict.
3:00–8:00 (5 min)	**Raymond Tao**	**SRS Structure, Requirements & Evaluation Metrics:** Walked through Functional Requirements (`FR1`–`FR14`), Non-Functional Requirements (`NFR1`–`NFR10`), symbolic constants (`MIN_F1_SCORE` $= 0.80$, `MAX_FPR` $= 10.0\%$, `MIN_BASELINE_DELTA` $= +0.10$), and the formalization of Macro-F_1, False Positive Rate (FPR), and abstention coverage.

8:00–12:00 (4 min)	**Richard Han**	**Hazard Analysis Boundary & FMEA (`H1`–`H10`):** Presented the seven internal components (`C1`–`C7`), critical assumptions (`A1`–`A5`), and Failure Mode and Effects Analysis (FMEA) rows covering false positives, false negatives, prompt injection/hallucination, privacy retention leaks, and evaluation leakage.
12:00–15:00 (3 min)	**Jaden Moore**	**Safety Requirements (`SR1`–`SR9`), Concurrency & Roadmap:** Presented the five-state request lifecycle (`pending`, `completed`, `inconclusive`, `failed`, `cancelled`), UUIDv4 request-to-result binding, zero-retention ephemeral cleanup, and milestone phase-in plan.
15:00–20:00 (5 min)	**All Members & TA Rebecca Di Filippo**	**Targeted TA Questions & Rubric Alignment Review:** Resolved open questions on SRS template choice, scope exclusions (opinion/satire), high-level goal phrasing vs. requirement metrics, revision history conventions, and GenAI disclosure verification.

1.3 Key Technical Questions Discussed and TA Decisions Recorded

Table 3 records the specific engineering and documentation questions raised during the October 7 consultation with TA Rebecca Di Filippo, the feedback received, and the resulting decisions implemented in the repository.

Table 3: Summary of TA Feedback and Decisions from the October 7, 2026 Consultation

Topic / Question Raised	TA Feedback (Rebecca Di Filippo)	Final Team Decision & Implementation
1. SRS Template Selection & Unused Folders	Select one primary SRS template, document any structural adaptations clearly in a table, and delete unused template folders (`SRS-Volere`, `SRS-Meyer`) so the repository is clean.	Adopted **Bertrand Meyer's PEGS SRS structure** (*Goals, Environment, System, Project*) adapted into LaTeX in `docs/SRS/SRS.tex`, added Table 2 documenting all template additions, and removed unused template directories.
2. Narrowing Detection Scope & Handling Opinion / Satire (Peer Issue #15)	Do not claim to detect general "misinformation" or "truth" across arbitrary writing. Explicitly bound the task to AI-generation and manipulation signals, and state how opinion/satire are handled.	Bounded scope to AI-generated and manipulated text and static images; explicitly excluded pure opinion, satire, and open-ended fact-checking in SRS Section G.6, requiring an `inconclusive` abstention (`FR4`) when task signals do not apply.

Topic / Question Raised	TA Feedback (Rebecca Di Filippo)	Final Team Decision & Implementation
3. High-Level Product Goals vs. Quantitative Percentages	High-level Goals (`G1`–`G6`) should read as non-expert product selling points (Problem → What it causes → What Verity addresses) rather than low-level "100% of analyses..." test targets. Keep numerical targets in the SRS requirements/NFRs.	Rewrote `G1`–`G6` in SRS Section G.3 as clear value propositions; placed all numerical thresholds in Symbolic Constants Table 6 (`MIN_F1_SCORE`, `MAX_FPR`, `MIN_BASELINE_DELTA`, `MAX_RESPONSE_TIME`) and `NFR1`–`NFR10`.
4. Synchronizing Hazard Analysis FMEA and SRS Safety Requirements	Every FMEA hazard must lead to concrete elimination or mitigation actions, and any derived Safety Requirements (`SR`) must appear in both the Hazard Analysis and the SRS with matching IDs.	Synchronized `SR1`–`SR9` word-for-word between Hazard Analysis Section 6 and SRS Section S.4 (Table 16), and added bidirectional trace links to `H1`–`H10` across all requirement tables.
5. Concrete Symbolic Constants and POC Plan Details (Issues #2, #13, #14)	Avoid leaving "Not set" or "TBD" placeholders for input limits or baseline comparisons. Name specific candidate detectors, datasets, and baseline delta targets now, and note them in Likely Changes if they may be tuned after POC.	Populated all 17 symbolic constants in SRS Table 6 (150–10,000 chars, 10.0 MB, 64 px–4096 px, 10.0 s timeout, +0.10 baseline Macro-F_1 delta) and documented concrete POC models/corpora (RoBERTa/DeBERTa on RAID/HC3; ViT/CLIP + EXIF/C2PA on CIFAKE/GenImage) in SRS Table 18.
6. Revision History, Reflections, and GenAI Disclosure Standards	Revision History must list specific individual author names (never "All" or "Team 23") and describe project/scope changes (not "revised against rubric"). Reflections must include personal individual voices, and GenAI disclosures must state completed verification steps.	Updated Revision History tables in both documents with individual developer names and substantive scope descriptions; wrote individual member reflections for Calvin, Raymond, Jaden, and Richard; documented completed verification audits for **Gemini 3.1 Pro**.

2 Team Working Session — October 5, 2026 (SRS & Hazard Brainstorming)

This section records the outcomes of Team 23's pre-consultation working session held on October 5, 2026 to prepare our initial requirements and component FMEA prior to meeting with the TA.

2.1 Attendance and Session Summary

- **Date:** Monday, October 5, 2026
- **Attendees:** Calvin Salsali, Raymond Tao, Jaden Moore, Richard Han (4/4 present)
- **Objective:** Draft initial functional/non-functional requirements and conduct component-level FMEA brainstorming ahead of the October 7 TA consultation.

2.2 Technical Architecture and Hazard Brainstorming Outcomes

1. **Five-State Request Lifecycle (`FR6`, `SR4`):** Jaden and Calvin identified that a binary "success vs. error" state is unsafe when wrapping ML detectors. The team agreed on five mutually exclusive states: `pending`, `completed`, `inconclusive` (pipeline succeeded, but signals are weak/conflicting or text is subjective opinion/satire), `failed` (timeout $>$ 10.0 s or dependency error), and `cancelled` (user aborted or declined external consent).

2. **Newly Surfaced Software Hazards (`H3`, `H4`, `H7`, `H8`, `H9`):** While walking through component boundaries `C1`–`C7`, Richard and Raymond identified indirect prompt injection from webpage text (`H3`), residual temp files on crashed/cancelled checks (`H4`), and SVG script execution / image decompression bombs (`H7`), while Calvin and Jaden identified out-of-order async responses overwriting newer checks (`H8`) and cross-session state contamination (`H9`).

3. **Cultural and Linguistic Fairness (`LO_Impact`, `FR14`, `NFR10`):** Reviewing literature on AI-text detectors [1] highlighted high false-positive rates on English as a Second Language (ESL) writing. The team added subgroup false-positive slice reporting (`FR14`, `NFR10`) and non-accusatory phrasing (`SR2`).

3 Post-Meeting Action Items and GitHub Issue Assignments

Table 4 tracks the concrete action items assigned after the October 7 TA meeting, each scoped to a single owner with verifiable completion criteria.

Table 4: Post-Meeting Action Items and Single-Owner Assignments

Issue / Task	Assigned Owner	Actionable Deliverable and Completion Criteria	Status
Issue #17	Calvin Salsali (`@CalvinSalsali04`)	Finalize SRS Section (G) Goals (high-level selling points `G1`–`G6`), Stakeholder Table 7, User Personas (Maya, Marcus, Priya), and Behaviour Overview Activity Diagram; record October 7 TA meeting notes.	Completed (Oct 19, 2026)

SRS Formalization & POC Plan	Raymond Tao (`@Raymondtaoo`)	Finalize Symbolic Constants Table 6, Section S.9 mathematical formalization (Macro-F_1, FPR, Coverage), POC detector/benchmark Table 18, and subgroup fairness requirements (`FR14`, `NFR10`); resolve Peer Issues #2, #13, #14.	Completed (Oct 19, 2026)
SRS Lifecycle & Phase-In Plan	Jaden Moore (`@JadenAntM`)	Finalize request lifecycle requirements (`FR6`, `FR10`, `FR11`), Subsystem Boundary Table 13, Milestone Phase-In Plan Table 19, and Hazard Analysis Section 7 Roadmap; triage Peer Issue #3.	Completed (Oct 19, 2026)
Hazard Analysis FMEA & SRs	Richard Han (`@richy1337`)	Finalize Hazard Analysis component diagram (`C1`–`C7`), landscape FMEA Table 4 (`H1`–`H10`), synchronized Safety Requirements (`SR1`–`SR9`), and bidirectional traceability matrix.	Completed (Oct 19, 2026)
